

Affordable broadband internet access.

Even at remote locations.

## WHY REMOTE BROADBAND?

The market for wireless access points is expected to be \$1 billion by 2009 and vendors are reporting a sharp increase in both inquiries and request for proposals.

-In-Stat, A market research firm

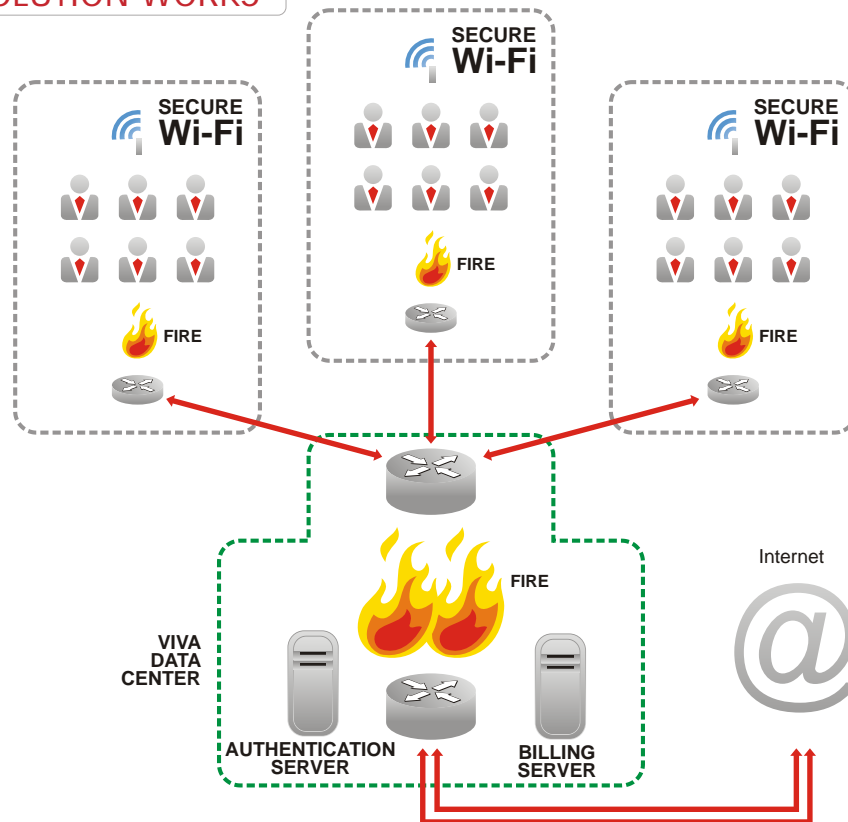

- Is your business running in a rural neighborhood and you think that you are missing out on the Internet revolution because service providers won't run high-speed links to their locations?
- Do you have a warehouse in a remote location where you don't have broadband as service providers don't run high speed links there?
- When was the last time you organized a convention and couldn't allow your participants to showcase their products because of lack of good internet facilities at the convention center?
- Are you a carrier or an ISP looking at delivering broadband Internet services to residential and small business customers without dependence on copper lines?
- Are you a carrier looking at offering wireless broadband on demand?
- VIVA's remote broadband services are ideal for remote business centers, rural hubs, resorts, large landscapes, industrial sites and temporary locations. In these places, the Internet service could be a satellite, leased line or microwave connection, primarily places where wired broadband alternatives aren't ready.
- VIVA's remote broadband services have a practical solution for provisioning broadband Internet through wireless mesh technology. Broadband Internet in remote locations can be expensive, even prohibitive to most business users and domestic users. Through VIVA's technology, even users in remote locations can get affordable access to broadband Internet.

## VALUE PROPOSITION

- Coverage multiple hops get to the places that you need to reach
- **A practical solution - it is very intuitive and user friendly**
- Bandwidth management customized provisioning that ensures right allocation to users
- Access management multi-level remote logins that makes administration easier from anywhere
- Strong security certified encryption using 2048 bit keys

## HOW VIVA SOLUTION WORKS

Our remote broadband solution can be rolled out quickly and efficiently, often serving areas where major network providers are not satisfying the demand for affordable broadband.

Our solution can cover hundreds of square miles using dozens of access points. The solution is compatible with 802.11 WiFi networking, working with windows, linux and remote hand held devices.

VIVA has implemented this solution across the world that includes US, UK and India.

## MULTIPLE ADVANTAGES

- Instant broadband and telephony for outdoor events and disaster relief
- Telephony applications using Voice over IP with SIP routing
- CCTV surveillance using PC compatible web cams
- Mobile connectivity for automobiles and public transportation
- Embedded applications in remote sensors for industrial applications
- Multi-media streaming
- **Open access TV and Radio Stations**
